

PROJECT SPECIALISTS

Bearing & Transmission has an experienced project team that can assist you with technical assistance and system training in bearing, power transmission, lubrication, material handling and conveying components. Mechanical drive review for optimal performance, as well as product rationalization and standardization to minimize on-site inventory requirements are just a few of the services Bearing & Transmission can provide.

Capital / Construction & Maintenance, Repair, Operations (MRO) Projects

- Management of mechanical components to meet mill standards product / system improvements
- Project experience in mining, sawmill, pulp & paper, panel board, steel, oil & gas, construction, utilities, Bio Fuel, and Alternative Energy
- Experienced product specialists
- Engineering and technical support groups

Technical Component Review, Selection, & Standardization

- Full mechanical drive review and analysis including mechanical drive ratings, overhung load capacities, and design flexibility
- Formal standardization process minimizes number of manufacturers eliminating duplicate spare parts inventory, reducing overall costs

Reporting

- Project expediting service to ensure deadlines are met
- Record Documented Value Added® (DVA) cost savings for all projects
- Deliver detailed mechanical equipment survey information for upload into our Customer Maintenance Management System (CMMS)
- Regular project updates to all stakeholders
- Detailed spare parts recommendations
